ABSTRACT

A speech recognition unit (114) and a processor unit (116) of a
foreign language learning device (100) receive sentence speech information
corresponding to a sentence pronounced by a learner (2) to separate the
information into word speech information on the basis of words included in
the sentence.   The processor unit (116) evaluates the degree of matching
(likelihood) of each word speech information with a model speech, and a
resultant evaluation is indicated on a display unit (120) on the basis of each
word.
